

Here are the supplies needed for this project, not including the organizer.

Here I am cutting 28-inch lengths of 2 x 4s that will be screwed to the bottom of the literature organizer.

I used clamps to hold the 2 x 4s to the bottom of the bottom panel so that I could drive and countersink the screws from inside the organizer.

Here is a photo of the underside of the bottom panel with the 2 x 4s and casters.

This photo shows the box of the organizer after it was glued and clamped together.

Here is the finished magazine storage unit. I found that each slot would not always hold a full 12 months of magazines.
